

Press release

Bouygues Immobilier and Steria launch Si@go, an energy-management software solution for commercial buildings

Paris – 10 October 2014 - Bouygues Immobilier and Steria have signed a partnership agreement for the joint marketing of Si@go, an innovative energy-management solution for commercial buildings.

Marketing Si@go more widely will make it possible to enact global energy standards¹ in all commercial buildings, be they new or renovated: it will be possible to monitor the energy production and consumption of buildings in real time, to control their comfort indicators, and to optimise energy consumption estimates.

Si@go V2 paves way to comprehensive energy-consumption analysis

Developed by Bouygues Immobilier and Steria, who have been combining their experience for close to five years, this new iteration of Si@go, the only software of its kind on the market, comes with a host of new features. For example, it can draw up energy and economic management charts expressing values in KWh or in euros, take account of occupant comfort through temperature management, and continually monitor air quality. When incorporated into a company's overall information system, Si@go can provide transparent, effective analysis for senior management, finance executives, human resources departments, support service managers and staff in general. The full amount of data can also be used by building managers to optimise a building's real-time use of energy.

Any energy transition strategy must take account of buildings, and Si@go is a powerful tool for ensuring that commitments, both environmental and budgetary, are respected. Si@go cuts costs and guarantees energy efficiency in the long run by processing masses of data that is collected minute by minute. Occupants and building managers are consequently able to attain continuous improvements in energy performance, taking into account weather conditions and changes in usage habits. Construction of buildings means more than simply drawing up an Energy Performance Contract. Today they must fit into the comprehensive urbanisation projects of the "smart" cities of tomorrow.

"Our partnering with Steria to market Si@go will open new doors for rolling out the next generation of positive-energy commercial buildings, whether built from scratch or renovated. It will enable us to build on our head start in this field, using applications that are increasingly innovative, thus strengthening our role as precursors in building- and neighbourhood-level energy efficiency," **said Eric Mazoyer, Deputy CEO of Bouygues Immobilier.**

¹ These standards are HQE (France), Breeam (UK) and Leed (USA). Green Office® Meudon has dual certifications: "HQE Passeport Exceptionnel" and "Breeam Excellent". Each of these three standards uses targets and variable requirements in their definition of energy performance. Si@go and its customisable energy analyses make it possible to measure whether the targets of these various standards have been attained.

"The smart city uses digital technology and networks to optimise urban spaces and services. These projects more than ever require expertise from several fields. Pooling know-how has consequently become vital. Developing Si@go in conjunction with Bouygues Immobilier, together with our joint efforts in several major projects in recent years, are the perfect embodiment of our expertise in making smart cities become a reality," **stated Olivier Vallet, CEO of Steria France.**

Additional information: Si@go was initially developed for Green Office® Meudon, Steria's head office building and France's first positive-energy office building meeting international standards. For three years, Si@go has certified that energy-management targets are being met, most notably those designated by the Energy Performance Contract (EPC) signed between Bouygues Energies & Services (the building manager) and Scor (the owner) and Steria (the tenant).

About Bouygues Immobilier

Bouygues Immobilier is a leading private property developer in France and Europe, with 1,558 employees at 31 December 2013 and sales of €2,510 million in 2013. With 35 branches in France, two elsewhere in Europe, and one in Morocco, the company has over 50 years' experience in developing residential, corporate and commercial projects for customers in more than 230 towns and cities. Embracing an active approach to sustainable development and innovation, Bouygues Immobilier is committed to continuously improving both the technical and architectural quality of its buildings and customer satisfaction. Bouygues Immobilier was the first property developer in France to achieve ISO 9001 certification. On 1 July 2010, it initiated a systematic approach to obtaining BBC-effinergie® certification for all of its residential properties, more than two and a half years ahead of schedule.
