BOUYGUES BÂTIMENT FRANCE CREATES AN ENTITY DEDICATED TO INDUSTRY

Bouygues Bâtiment France, a subsidiary of Bouygues Construction, has created an entity dedicated to industry to support green reindustrialisation in France and to promote decarbonisation. With Bouygues Bâtiment Industrie, Bouygues Bâtiment France is continuing its efforts to decarbonise the construction and industrial sectors throughout France.

Eight areas of expertise in support of industry

In a rapidly changing industrial landscape, Bouygues Bâtiment Industrie is positioned as a key player supporting French and international industrial customers and engineering companies in the design and implementation of their projects. So that they can benefit from the best possible production tool, our specialist industrial civil engineering teams and integrated engineering are committed to meeting their needs for regulatory and safety compliance, reliable completion times and environmental protection.

This new entity is organised around eight areas of expertise for a better quality of service:

- Sustainable mobilities
- Data centres
- Manufacturing
- Logistics
- High tech
- Life sciences
- Food processing
- Energy

William Nippert, CEO of Bouygues Bâtiment Industrie, said: "Specialising in the construction and refurbishment of production facilities, our highly qualified teams bring expertise and professionalism to every stage of the project. Bouygues Bâtiment Industrie offers its customers, engineering firms and industrial partners customised turnkey solutions, backed by the power of a major group operating throughout the entire value chain. This new entity will contribute to the development of industries undergoing major change and support the decarbonisation of the sector, which is one of the levers for the reindustrialisation of France. All the expertise available within the Bouygues group will be harnessed throughout the whole of France to ensure the success of this major transformation in strategic sectors."

Drawing on the expertise and regional roots of Bouygues Bâtiment France, the teams dedicated to industry can count on the support of their networks of local partner companies, and they have set up numerous integration and training initiatives to stimulate local employment.

Health and safety measures at the heart of our projects

Health protection and accident prevention are the top priorities for every Bouygues Construction subsidiary. The company takes a proactive approach, involving its partners (suppliers, subcontractors and temporary employment agencies in the sector) in this effort. Committed to the health and safety of everyone working at its sites, the company makes this an absolute priority. The health and safety approach is adopted at all our production sites, supported by a large network of health and safety officers on the ground. The teams are trained in the specific risks associated with industrial projects, particularly when they are working close to an industrial site in operation. This day-to-day work is supported by research and development initiatives that involve digital tools, virtual reality, ergonomists and safety researchers.

A global purchasing network

Bouygues Construction's international network of buyers can source, develop and propose solutions tailored to each industrial project, under the best possible conditions in terms of cost, quality and deadlines. Their in-depth knowledge of industrial markets enables them to find the best partners and products to meet the needs of EPC (Engineering, Procurement and Construction) projects and to ensure that social responsibility is an integral part of the purchasing process.

Powerful synergies between Bouygues Construction, Equans and Colas

These strong synergies enable us to provide our industrial customers with a comprehensive response and global support, both in the construction and the operation and maintenance of their projects.

International references

Thanks to its extensive international presence, Bouygues Construction, alongside Equans and Colas, is able to offer its customers unique know-how and shared experience in a wide range of fields, including industrial buildings, data centres, logistics platforms and nuclear power generation infrastructure.

ABOUT BOUYGUES CONSTRUCTION

With 32,500 employees working in 60 countries, Bouygues Construction designs, builds and rehabilitates the infrastructures and buildings that are essential for a sustainable society. All over the world, the Group's teams support the development of low-carbon energy production and public transport infrastructures and provide their expertise in the design, construction and renovation of buildings and neighbourhoods essential to life (health, education, work, tourism, leisure, public services, defence, etc.). The teams' commitment is based on three top priorities: safety culture, respect for human rights and ethics. In 2023, Bouygues Construction generated sales of €9.8 billion.
