

## **TotalEnergies and Colas are renewing their partnership to decarbonize the construction business**

**TotalEnergies and Colas are renewing their 3-year partnership, working together to speed up the decarbonization of the construction business in France and abroad. This collaboration is in line with the strategy of these two French companies to support the energy transition, both for their own operations and for those of their customers.**

### **A multi-energy partnership to reduce emissions**

In this partnership, TotalEnergies and Colas are continuing to develop decarbonization solutions in three major areas:

- Large-scale deployment of multi-energy solutions such as supplying construction sites with biofuels (hydrotreated vegetable oil - HVO) and electricity via batteries, replacing the traditional generators;
- Installing electric recharging infrastructure powered by guaranteed renewable electricity for the Colas fleet of electrically-powered lorries, machinery and worksite equipment;
- Making the most of existing Colas land by installing solar power plants that contribute to generating renewably-sourced electricity and to making the sites energy-independent.

These solutions meet the ambitious objectives of the Colas Group's low-carbon and biodiversity roadmap, which aims for a 46.5% reduction in the group's greenhouse gas emissions (scopes 1 and 2) by 2030. TotalEnergies is leveraging its expertise to achieve this through its multi-energy strategy, offering a wide range of low-carbon solutions. In addition to reducing its own emissions, by 2030 TotalEnergies aims to achieve a 25% cut in the carbon intensity of the energy products it sells to its customers, from 2015 levels.

### **A large-scale project in France to implement solutions with a low carbon footprint**

The first phase of collaboration involved testing carbon footprint reduction solutions on Colas Group construction sites, including a large-scale refurbishment project in France, currently in its final phase.

Under this project, TotalEnergies supplied HVO100 (Hydrotreated Vegetable Oil), a 100% renewable biofuel, to power more than 220 machines and heavy goods vehicles working on the site. Using this alternative fuel immediately reduces CO<sub>2</sub> emissions by 60% to 90% compared with fossil fuels.

Electric batteries with a capacity of 2.4 MWh have also been installed to replace generators, in particular to power the site facilities. They have provided a reliable and efficient electricity supply.

Carried out under exceptional conditions, this experiment reduced CO<sub>2</sub> emissions by almost 4,000 metric tons and confirmed the feasibility and effectiveness of innovative multi-energy solutions on an isolated worksite.

“*The renewal of our partnership with TotalEnergies illustrates our determination to speed up the decarbonization of our business. Innovative multi-energy solutions and the development of our land resources will consolidate the position of the Colas Group as a low-carbon worksite operator serving its customers,*” says **Pierre Vanstoflegatte**, CEO of the Colas Group.

“*We are looking forward to continuing this partnership with Colas. Our multi-energy offers provide practical and innovative low-carbon solutions to support our customers in decarbonizing their activities,*” says **Bernard Pinatel**, the Downstream Operations, Marketing and Services Director at TotalEnergies.

#### About TotalEnergies

TotalEnergies is a global integrated multi-energy company that generates and supplies energy: petroleum and biofuels, natural gas and green gas, renewable energy and electricity. The company has more than 100,000 employees, committed to providing more affordable, available and sustainable energy to as many people as possible. Operating in some 120 countries, TotalEnergies places sustainable development at the core of its strategy, projects and operations.

Note: The terms "TotalEnergies", "TotalEnergies company" and "Company" used in this document refer to TotalEnergies SE and the consolidated entities that TotalEnergies SE directly or indirectly controls. Similarly, the terms "we", "us" and "our" may also be used to refer to these entities or their employees. The entities in which TotalEnergies SE directly or indirectly holds an interest are separate and independent legal entities. This document may contain predictive statements. These may prove inaccurate in the future and are subject to risk factors. Neither TotalEnergies SE nor any of its subsidiaries undertakes any obligation or responsibility to investors or any other party to update or revise any of the statements, predictive information, trends or objectives contained in this document, for example in response to new information or future events. Information about risk factors that could have a significant adverse material effect on the financial results or business of TotalEnergies is also available in the most recent versions of the Universal Registration Document filed by TotalEnergies SE with the Autorité des marchés financiers (Financial Markets Authority) and the 20-F Form filed with the United States Securities and Exchange Commission ("SEC").

#### Colas ([www.colas.com](http://www.colas.com))

Colas, a subsidiary of the Bouygues Group, is a major player in the construction and maintenance of transportation infrastructure and urban development. Colas covers the entire value chain: from industrial production to service offerings, including construction work. Thanks to its local presence in some fifty countries on five continents, Colas achieved a consolidated revenue of €15.9 billion in 2024, 59% of which is outside France. With its 64,000 employees, a network of 2,000 operating units comprising 3,500 production units, and nearly 45,000 projects per year, Colas is the trusted partner of its customers. Colas maintains its pioneering, innovative and responsible spirit to connect people and foster the sustainable development of territories.
